Education

Shiv Nadar Institute of Eminence, Dadri, UP
B.Tech in Computer Science

2023 – 2027
CGPA: 8.3

Experience

IT Systems and Automation Analyst Intern

May 2025 – Jul 2025

Kyndryl, [Location], India

- Automated Windows OS deployment across 100+ enterprise devices using autounattend.xml with cmd and VBScript, orchestrating a 7-phase unattended installation pipeline.
- Developed bash scripts for performing ATA Secure Erase on cascaded devices, ensuring compliance with organizational data sanitization standards.
- Streamlined device onboarding by automating installation of regulatory and enterprise software, reducing manual setup effort for the asset management team.
- Resolved hardware and software configuration issues during provisioning, supporting end-user device readiness and onboarding workflows.

Software Engineering Intern (Backend)

Jun 2025 – Jul 2025

Engineers India Ltd., New Delhi, India

Projects

0Trace (SIH Hackathon Project)

2025

Go, Bash, Nix

- Built a bootable ISO for secure disk wiping compliant with NIST SP 800-88 Purge standards.
- Implemented backend logic in Go for disk detection and wipe orchestration.
- Integrated NVMe Sanitize, ATA Secure Erase, and AES-256 overwrite fallback mechanisms.
- Generated tamper-resistant wipe certificates in JSON and PDF formats with SHA-256 verification.
- Packaged a fully reproducible system using Nix for auditability.
- GitHub Repository

Lisa – Remote Configuration Service

2025

Python, Flask, REST APIs

- Built a lightweight remote configuration and feature flag service enabling applications to change behavior at runtime without redeployment.
- Designed a Flask backend exposing public read-only APIs for client applications and private write APIs for operators.
- Implemented project-scoped configuration namespaces with key-value configuration entries and strict API key based access control.
- Developed a CLI workflow (Mona) supporting YAML-based configuration synchronization with the remote service.
- GitHub Repository

TCCS – Software Engineering Project

2025

Java, Javalin, jOOQ, PostgreSQL

- Built a backend web application using Java with Javalin and jOOQ for type-safe database access.
- Designed and managed PostgreSQL database schemas with automated code generation via jOOQ.
- Implemented RESTful API endpoints for application data management and business logic.
- GitHub Repository

Technical Skills

Languages: Java, C, C++, Go, Python, TypeScript, Zig, Assembly (ARM, i8086)

Backend & Databases: Node.js, Next.js (API routes), Javalin, PostgreSQL, MySQL, SQLite

Cloud (AWS): EC2, S3, Lambda, IAM, VPC

Auth & Infra: NextAuth, Docker, NGINX, Linux

Tools: Git, Nix, Bash

LeetCode: 280+ problems across C++, C, and Rust
